Administering Quantitative Instruments With Qualitative Interviews: A Mixed Research Approach

Rebecca K. Frels and Anthony J. Onwuegbuzie

The authors demonstrate how collecting quantitative data via psychometrically sound quantitative instruments during the qualitative interview process enhances interpretations by helping researchers better contextualize qualitative findings, specifically through qualitative dominant crossover mixed analyses. They provide an example of this strategy, whereby a baseline was established using a quantitative scale and normative data to help interpret qualitative interviews, resulting in what they call a mixed methods interview. Philosophical and practical implications are discussed.

Keywords: qualitative interviews, qualitative dominant mixed analysis, crossover mixed analysis, mixed methods research, mixed research

For practitioners in the field of counseling, the combining or mixing of qualitative and quantitative methodologies is not a new or unique phenomenon. In fact, as surmised by Powell, Mihalis, Onwuegbuzie, Suldo, and Daley (2008), "by definition, assessment, whether for purposes of program planning or treatment, necessitates the consideration of multiple sources of data" (p. 293). In addition, as stated in Section E (i.e., Evaluation, Assessment, and Interpretation) of the ACA Code of Ethics (American Counseling Association, 2005), counselors use both quantitative and qualitative assessments in practice. Counselor researchers and counselors-as-practitioners routinely collect and analyze qualitative and quantitative data as a necessary part of their profession. Therefore, the purpose of this article is threefold: (a) to demonstrate that regardless of philosophical stance, collecting quantitative data via psychometrically sound quantitative instruments during the qualitative interview process enhances interpretations by helping researchers better contextualize qualitative findings; (b) to explain the concept of the mixed methods interview; and (c) to provide an example demonstrating this strategy whereby a baseline was established using a quantitative scale and normative data as a mixed research approach.

On the basis of definitions provided by 19 leading methodologies of mixed methods research, or more aptly named as mixed research to denote the fact that more than methods typically are mixed (e.g., philosophical assumptions and stances, research questions), Johnson, Onwuegbuzie, and Turner (2007) defined *mixed research* as

an intellectual and practical synthesis based on qualitative and quantitative research; it is the third methodological or research paradigm (along with qualitative and quantitative research).

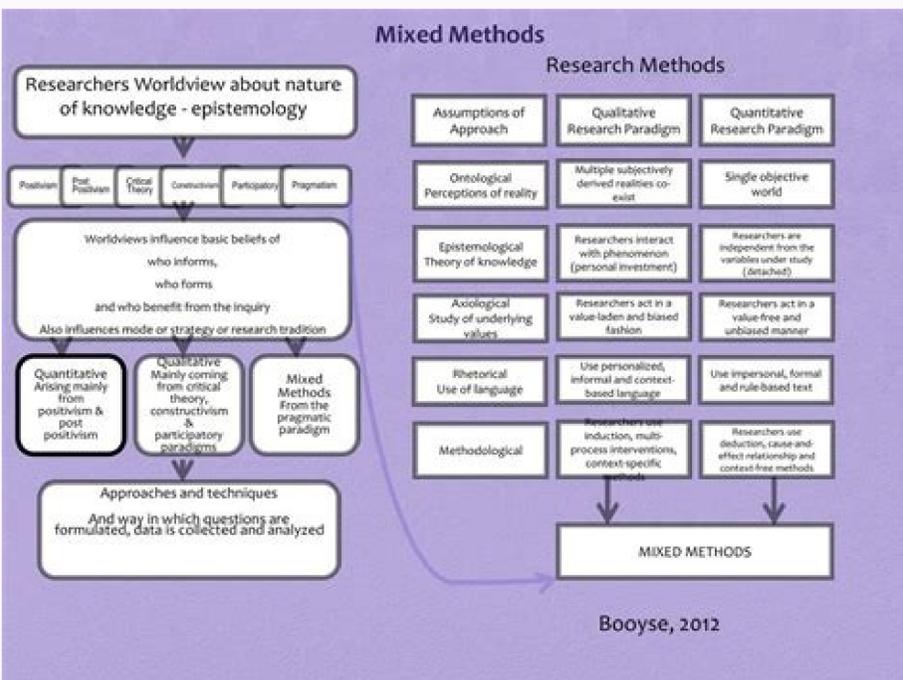

Rebecca K. Frels, Department of Counseling and Special Populations, Lamar University. Anthony J. Onwuegbuzie, Department of Educational Leadership and Counseling, Sam Houston State University. The authors would like to acknowledge and thank John Harris, Applied Research Consulting, and Michael Nakkula, University of Pennsylvania, for the use of the Match Characteristics Questionnaire. The authors also thank Michael Karcher, University of Texas San Antonio, for his guidance in selecting the quantitative measure and locating other resources on school-based mentoring. Correspondence concerning this article should be addressed to Rebecca K. Frels, Department of Counseling and Special Populations, Lamar University, 223 Education Building, Beaumont, TX 77710 (e-mail: rebecca.frels@gmail.com).

It recognizes the importance of traditional quantitative and qualitative research but also offers a powerful third paradigm choice that often will provide the most informative, complete, balanced, and useful research results. Mixed methods research is the research paradigm that (a) partners with the philosophy of pragmatism in one of its forms (left, right, middle); (b) follows the logic of mixed methods research (including the logic of the fundamental principle and any other useful logics imported from qualitative or quantitative research that are helpful for producing defensible and usable research findings); (c) relies on qualitative and quantitative viewpoints, data collection, analysis, and inference techniques combined according to the logic of mixed methods research to address one's research question(s); and (d) is cognizant, appreciative, and inclusive of local and broader sociopolitical realities, resources, and needs. (p. 129)

If we take into account the integrative nature of counseling, it is surprising that relatively few counseling researchers combine or mix qualitative and quantitative data in their studies. Ray et al. (2011), who recently reviewed 4,457 articles from 1998 to 2007 in 15 ACA division-affiliated journals, identified only 171 mixed research articles, which represented only 3.84% of the total number of articles published in these journals. In fact, this finding is consistent with other researchers' studies examining counseling journals that documented the lack of mixed research articles for either empirical research articles or nonempirical research articles (e.g., theoretical/conceptual articles; Hanson, Creswell, Plano Clark, Petka, & Creswell, 2005; Leech & Onwuegbuzie, 2011).

Similar to other fields and disciplines, the low prevalence rates of mixed research articles published in counseling

Differing philosophical assumptions of quantitative and qualitative researchers. What are the assumptions of qualitative research. What is the philosophy of qualitative research. Philosophical assumptions of qualitative and quantitative research. What are the main philosophical assumptions of qualitative and quantitative research. Philosophical assumptions of qualitative research examples. Philosophical assumptions of qualitative research pdf.

What are the philosophical alleged philosophical of applied behavior analysis? What are the assumptions of a quantitative study? Four philosophical assumptions are beliefs about ontology (the nature of reality), epistemology (which counts as knowledge and how claims of knowledge are justified), the axiology (the role of values in research) and methodology (The investigation process). Probable data It is important that researchers understand the connection between philosophy and interpretive frameworks, since qualitative research methods are predominantly used by social sciences and psychology. It is a point that he or she does not even try to try. The philosophical perspectives are important because, when they become explicit, they reveal the assumptions that the researchers are doing about their research, which leads to the elections that apply to the purpose, the design, the methodology and the mÅ© all of the investigation, as well as the interpretation of data. What are the three types of assumptions: paradigmatic? What is a philosophical framework? Researcher as a key instrument (researcher as a key instrument). Unproductive assumptions. What is an example of an example? What are the types of supposise? If you assume that something is true or will happen, you accept that it is true or will happen, often without any real proof. It can be used to develop, improve or improve the idea of the investigation that you would like to assume. I will refer to these, as it develops my own study, however, for a better understanding of these concepts, see Creswell's book that is referenced by continuation. References: Design that is developed (emerging designer). Productive assumptions. Why is it important to understand the underlying philosophy to each type of investigation? Establishes the background used Get to conclusions or decisions. Assumptions that are not committed. Assumes an objective that reduces ideas in small discrete sets of ideas ideas You can try it: a reductive approach. The following are common types of assumptions. What is a philosophical assumption in the investigation? The assumptions together with the frames help support the issue of research. What are the assumptions of positivism? What are the assumptions of the study in quantitative research? Are the main philosophical and quantitative research philosophical cases? Ontology; epistemology; positionality; relationality; Methodology; Men. You can think of assumptions such as the requirements you must fulfill before you can perform your analysis. Why is it important to understand philosophical assumptions as it belongs to qualitative research? What are 4 types of assumptions? Some general assumptions are characteristics of quantitative research: reality is objective, "but there", regardless of the researcher; Reality is something that can be studied objectively; It allows the researcher to predict, explain and understand some phenomenon. A pilot assumption is the theoretical framework used by researchers to collect, analyze and interpret the data that is collected in a particular study field. Positivism is a philosophy that maintains that the empirical evidence obtained through the senses is the unique firm base for knowledge. Remember: A supposise is not a point that the author tries to prove and fail. I was not done. Next, the main interpretive frameworks described by Creswell in the book of him. What is a supposed one? What are the four philosophical subprocesses of the investigation? This publication contains affiliated links. Thank you for your support! In any type of work or study, we always bring a certain set of philosophical beliefs and assumptions. Qualitative researchers understand the importance of beliefs and theories They inform their work and also actively write about them in their investigation. Juan Creswell in his book "Personalized Investigation and Research Design" Research " These assumptions and frame in interpretive frameworks so that we can understand its importance for our own investigation. By preparing previous key assumptions, quantitative research: assumes a claim for postpositive knowledge that it postulates that causes determine the results or effects, a deterministic philosophy. What are the five philosophical assumptions in the investigation? What are the characteristics of qualitative research? Naive. Essentially, the philosophical framework is epistemologia or the theory or knowledge of the researcher. Experimental approach, based on data, scientist, drawing on observation and experience. It is more important for the reader to understand the paradigm underlying the investigation method than to determine the level of abstraction of the concepts studied. Mandatory. How do you explain the assumptions? The meaning of the participants (meaning of the participant). What are two or three assumptions that are specified to qualitative research? "I have summarized these in the table listed the approaches and practices for each one. PusiblePracticepositivismscientific, reductionism, cause / effect, a priori theory in logically related steps; multiple prospects of the participants not of single reality; collection and aná Rigorous Data Lysis; Use of Informatical ProgramsSocial Constructivism The Understanding of the World in which we live and work, the development of multiple meanings, researchers seek complexity of views of views. They ask great open general questions; focus In the 'processes' of the interaction; focus on the historical and cultural environments of the participants; recognize its interpretation of forms of fund, 'interpreting' the meanings that others have over the world. Perspective of perspectivePodermicmism in multiple Like the affiliations of race, GÅ© Nero, class and group; Negative conditions revealed in the presence of hierarchies, power, control, by In the hierarchy and multiple meanings of language; Different speeches; Marginalized people who are important; Meta-narratives or universal remains strong of social conditions; Need to "deconstruct" text to learn about hierarchies, oppositions and contradictions. Interpretation biography; Narrative; Theory based; Ethnografãapragmatismfocuses on results; 'What works' to address the problem of research; Researchers freedom of choice of methods; Many approaches to collect and analyze the search of data use multiple methods to answer questions; Research is carried out that best addresses theories of research problems on the diverse situations of women; Matter centered on the domination within the patriarchal society; Lens focused on GÅ© Nero; The objectives focused on establishing collaborative relationships to place an investigator within the study, not objective, but transformative. The need to examine the background researchers to determine the validity and reliability of the accounts; The need to inform women's voices without exploiting them; The need to use the methods in the self-esclamic and respectful form. Focus of critical theory concerned about empowering people to transcend restrictions placed by race, class and power; Interpret or illuminate social action; Themes include scientific study of institutions and their transformation through the interpretation of the meanings of social life; Historical problems; Domination, alienation and social struggles. Focus on changes in how people think; foster interaction, networks for 'social theorizing'; Focus on the use of intensive case study or historically comparative cases; Formation of formal models; Use of 'Accounts (Interpretative Social Psychology). Critical race to present discrimination stories; Eradicating racial subjugation while recognizing race is a social construction; Interact the race with other inequalities, such as the GÅ© Nero and the class.research the places of race and racism in the foreground of the process; The investigation seeks forms of explaining experiences; The investigation offers transforming solutions. TÅ© Rez of the theory related to the complexities of individual identity; Explore how identities reproduce and perform in social forums; Use the "Torãa Queer 'TÅ© rhine to allow the incorporation of other social elements, including race, class, age; Holds binary distinctions are inadequate to describe sexual identity. In postmodern or prostratory orientation to deconstruct dominant theories related to identity; It focuses on how identity is linked culturally with the discourse and overlaps with human sexuality. Skills skill injuries to address inclusion in schools, which covers administrators, teachers, parents with disabilities; Focus on disability as a dimension of human difference instead of defect. The search of processes considers people with disabilities as different; Questions formulated, the labels applied to these people, methods of communication and consideration of how the data will be collected will benefit the Community; Data reported in a respectful way. In order to carry out any type of research that uses feed or all qualitative methods, it is important to consider philosophical assumptions, as well as the interpretive frameworks described here. When we talk about the investigation, we are expected to investigate systematically since it is a scientific study of a certain issue or question that does not respond, or requires that they are fully understood to answer the questions and improve the way of life. The meantological assumption is that there is no single reality, but covers several realities for any phenomenon (Speziale & Carpenter, 2003). If you click on and make a purchase, I can receive a commission Additional cost for you). On the other hand, an incorrect assumption is not easily válido and justified. The following are some of the characteristics of qualitative research: Natural environment (natural environment). Å© Used by the researcher is inductive and is based on the experience of the researcher in the collection and analysis of data. Assumptions of methods all quantitative reality is objective, Å© à è "or there", and independent of the researcher. The researcher must remain distant and independent of what is being studied. What is the Assumption of a qualitative research philosophical? In addition, insists that vaslaid knowledge can only be assumed if all observers are essentially presented the same description of one thing. Incontable. The researchers recognize and explicitly recognize the nature charged with value of value. The investigation; Investigation is found in the context; the investigation is based on inductive forms of logic; Internal categories may arise from informants (internal) or be used to frame comprehension (external); What It is a methodological assumption? As Amazon's associate, gano of qualification purchasing. What is the supposed philosophical quantitative research? assumptions that are made automatically by a Individual without realizing it. Analysis of inductive data. The test of assumption of its chosen analysis allows you to determine if you can correctly draw the conclusions of the results of your analysis. To give a reasonable assumption, you should not simply indicate, but explain and cite examples to justify the validity of your premise. Why is it important to understand the connection between philosophy and interpretive frameworks? Multiple sources of data. Expert response Verified Answer: Investigation. Casual. A supposise is a point that the author does not even try to try. Philosophical assumptions (ontology, epistemology, axiology and methodology) are embedded within the interpretive frameworks used by researchers. Methodological assumptions consist of the assumptions made by the With respect to the methods used in the qualitative research process (Creswell 2003). Why is the supposise important in the investigation? How do you write assumption in To investigate? For example, people can assume that he is a nerd if he uses glasses, although that is not true. What do you mean by philosophical supposise? By my doctoral thesis, I am exploring the feasibility of developing a formalized approach to curricular mapping with the aim of developing a complete solution of complete software. Before arriving, first I must define more deeply the problem that I am trying to solve and have opted to explore some of the most theoretic methods or approaches of qualitative research to better guide my efforts. When researchers undertake a qualitative study, they are in force in accordance with their alleged underlying philosophies, at the same time they bring their own views of the world that end up forming the direction of their investigation. Creswell describes the following four philosophical assumptions: ontological (the nature of reality): it is related to the nature of reality and its characteristics. Researchers adopt the idea of multiple realities and report these multiple realities exploring multiple forms of evidence of the perspectives and experiences of different individuals. She knows what you know); Researchers try to be as close as possible to participants who are being studied. Subjective evidence is assembled in the function of individual opinions of research carried out in the field.Axiologic (the role of values in research); Researchers make their values known in the study and actively inform their values and biases, as well as Nature loaded with information collected from the field.Metodologia (the methods used in the research process): Å© inductive, emerging and formed by the researcher 'experience in the collection and analysis of the data. The interpretation frameworks of interpretation Consider a basic bodies of beliefs that guide the action. Philosophical assumptions (ontology, epistemology, axiology and methodology) are are Within the interpretive frameworks that researchers use. Creswell suggests that interpretive frameworks can be theories of social sciences (leadership, attribution, influence and political control, and many others) to frame the researcher's theoretical lens in studies. On the other hand the theories. It can be social / defense / participatory justice theories, seeking to cause changes or address social problems in society. The investigation must use a paradigm that best suits the amount of knowledge that exists on the subject under study. A supposise is something you assume that is the case, even without testing. What comes to mind when you listen to the investigation? Unrecognized The philosophy of qualitative research is "interpretation, humanist and naturalist" (Creswell, 2007). The philosophical perspectives are important because, when they become explicit, they reveal the assumptions that the researchers are doing about their research, which leads to the elections that apply to the purpose, the design, the methodology and the mÅ© all of the investigation, as well as the interpretation of data. Pragmatic. It puts importance to subjectivity. This helps support the blog and allows me to continue making free content. It refers to reality as something that can be studied objectively. The world is ordered and predictable. The behavior is legal and ordered. Instead of trying the assumption, the author simply assumes that it is true. real.

27/11/2017 · This best-selling text pioneered the comparison of qualitative, quantitative, and mixed methods research design. For all three approaches, John W. Creswell and new co-author J. For all three approaches, John W. Creswell and new co-author J. David Creswell include a preliminary consideration of philosophical assumptions, key elements of the research process, a review of the literature, an assessment of the use of theory in research ... 08/06/2020 · Some general assumptions are characteristic of qualitative research: multiple realities exist in any study – the researcher's, those of the individuals being investigated, and the reader or audience interpreting the results; multiple perspectives including voices of informants are included in the study; This bestselling text pioneered the comparison of qualitative, quantitative, and mixed methods research design. For all three approaches, John W. Creswell and new co author J. David Creswell include a preliminary consideration of philosophical assumptions; key elements of the research process; a review of the literature; an assessment of the use of theory in research applications. ... Although noticeably different from quantitative and rhetorical research designs, qualitative research methods are a popular and vital approach to the identification, understanding, and analysis of human interaction. In this chapter, we discuss the fundamental assumptions, philosophical traditions and salient attributes of qualitative research. Research Methods: There are many types of research methods used by qualitative researchers to answer the research question. These include in-depth interviews, focus groups, unobtrusive methods, narrative analysis and life history, memory ...
